

MyDevConnect

Backend Django take home assignment

Due date: 6pm GMT - 24 February

Instructions

Develop the backend of a todo list app.

The API infrastructure will consist of a RESTful API in django that connects to a PostgreSQL database. Users should be able to perform CRUD operations (Create, Read, Update, Delete) on todo items, and the data should be persisted in a PostgreSQL database.

Create a Postgres Database on the same server for the API to communicate with.

What to do on completion?

Upon completion, send the code for your app, and export your database to a .SQL file. Compress all of your files into a zip file and send it to support@mydevconnect.com
